**DETAILED ACTION**

1. Applicant's amendment filed on 6/20/02 has been entered. Accordingly, claims 3 and 9 have been amended, and claims 14-31 have been added. Claims 1-31 are pending in this application.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-31 are rejected under 35 U.S.C. 102(b) as being anticipated by Shaffner et al (U. S. Pat. No. 5,621,267).

As regards to claims 1-6, 14-22, Shaffner et al disclose a high-power metal halide reflector lamp (40), a light source (42), a ceramic reflector (44), which is made of alumina (col. 3, line 10), a transmissive front panel (58), a cooling device forcibly cools down the reflector (58, fig. 2), a power source (which is inherent), wherein the reflector is formed of a ceramic having a thermal conductivity of at least 0.005(cal/cc.sec.C) at a temperature of 20 degrees C ( this limitation is inherent, since reflector has a compound of an alumina or and other material in which is known to have such a physical characteristic).

As regards to claims 7-13, and 23-31, Shaffner et al disclose the claimed invention as applied above and further disclose that such high power metal halide lamps

find application in optical projection systems when used in combination with a reflector as shown in figure 1.

### ***Response to Arguments***

4. Applicant's arguments filed on 6/20/02 have been fully considered but they are not persuasive. With regards to the examiner's rejection of claims 1-13 and newly added claims 14-31, examiner maintains the rejection with the reference of Shaffner et al as under 102(b) as applied above. Applicant argues that alumina can have various thermal conductivities according to its content (%) and appearance. Examiner likes to direct applicant's attention to page 5-8 and 5-9 of "CRC Handbook of Chemistry and Physics by David R. Lide, 73<sup>rd</sup> edition, which shows the thermal property of chemical substances which are well established and are known.

### ***Conclusion***

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 2875

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
